

Decision Layer Dashboard

Investment decisions with human oversight

Project presentation
27 September 2026

The investment review problem

A reviewer must connect scattered information

Intended users
Portfolio analysts and investment reviewers

Portfolio context

Which holdings carry the exposure?

Changing assumptions

How would a macro shock change the outlook?

Decision ownership

What evidence supports approval?

The prototype workflow

- | | | |
|-----------|--------------------------------|--|
| 01 | Manage a portfolio | Edit holdings or import a validated CSV. |
| 02 | Explore a scenario | Change oil, FX, interest-rate and inflation assumptions. |
| 03 | Review a recommendation | Inspect rationale, confidence, risk and ESG context. |
| 04 | Record a decision | Approve or reject and inspect workflow history. |

A synthetic portfolio for the demonstration

\$15.3B

18 illustrative holdings
9 investment sectors

Synthetic fixture values
No client holdings or verified returns

AUM by sector (USD billions)

Portfolio Sentinel keeps a reviewer in control

BUY SELL HOLD

Each proposal includes a rationale, confidence and a catalyst.

5 pp

Maximum proposed change
per holding before
normalization

HOLD

Low confidence or
no retrieved headlines

Human review

Sign-off before simulation
No trade execution

Current boundary: scans fetch external news. An offline synthetic scan is still pending.

Application architecture

Interface

Next.js 16 and React 19

Pages and view-model hooks with shared Zustand state

Decision logic

TypeScript domain modules

Scenario calculations, validation and Sentinel guardrails

Persistence

Prisma and PostgreSQL

Holdings, recommendations, scenarios and audit records

Optional integrations

Inference and document retrieval

Provider adapters and pgvector support outside the offline demo target

Prototype status

Implemented

Portfolio editing and CSV import
Numeric scenario analysis
Recommendation review and audit trails
Sentinel guardrails and simulation

Before submission

Complete the offline synthetic demo
Remove tracked development credentials
Verify a clean install and full walkthrough
Publish source, slides and demo video

Source review: 49 tests passed. TypeScript passed. Lint: 0 errors, 1 warning.

The value of Decision Layer

A clear review path for an investment decision

Portfolio context and scenario assumptions stay visible while the reviewer examines a recommendation.

Next milestone

A reproducible synthetic demo with saved review history
